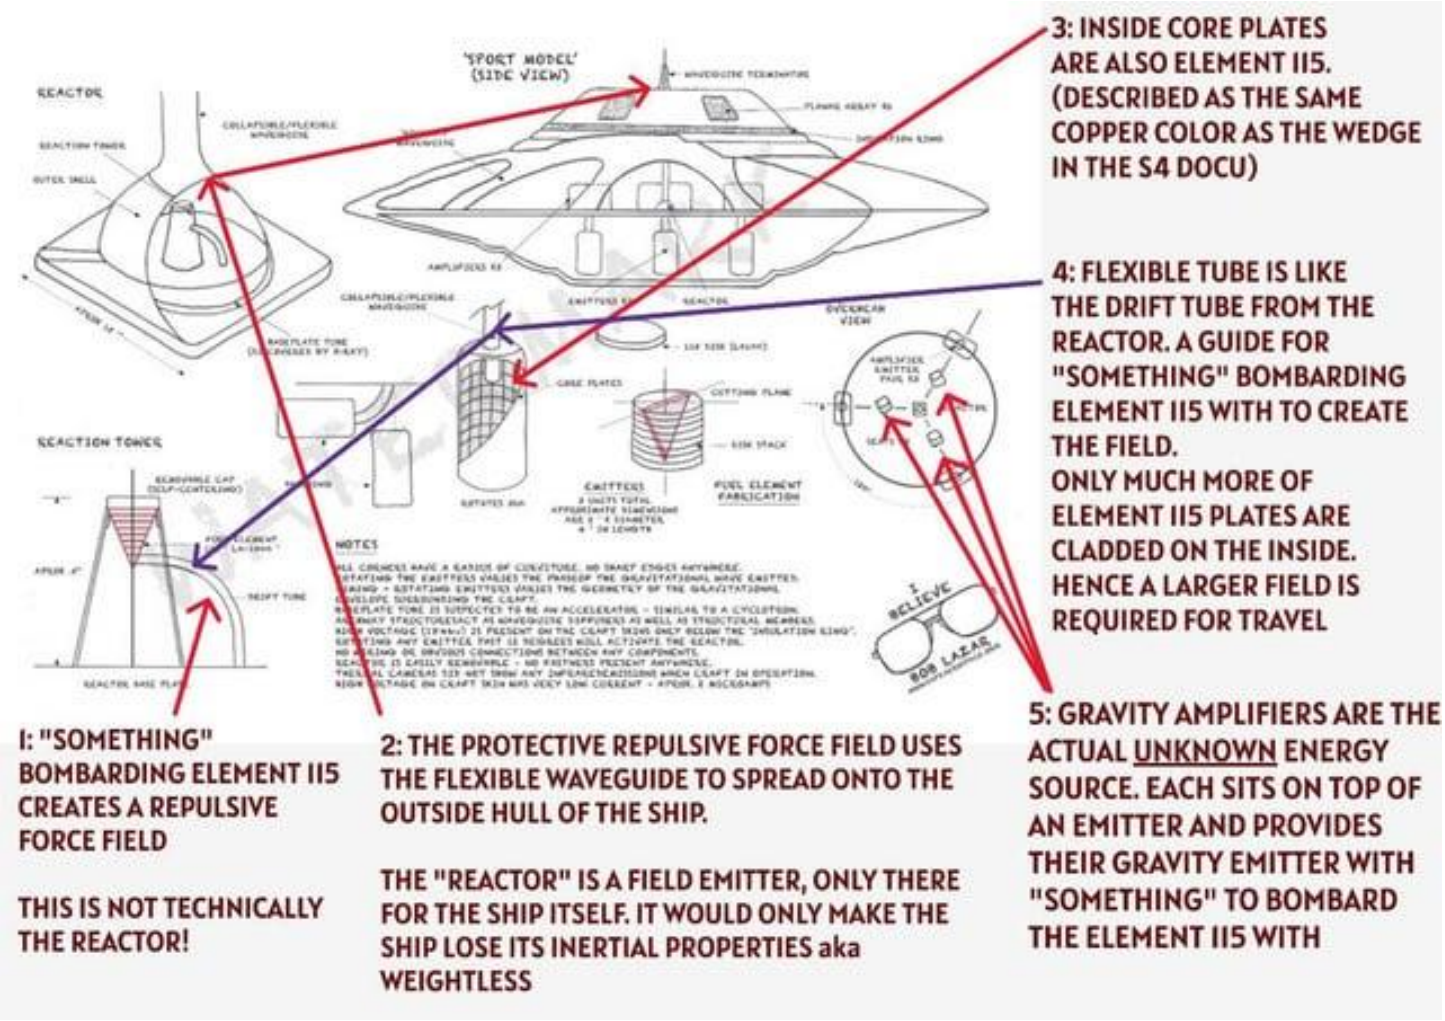
Amy Eskridge vs Bob Lazar And Propulsion Theory



3: INSIDE CORE PLATES ARE ALSO ELEMENT 115. (DESCRIBED AS THE SAME COPPER COLOR AS THE WEDGE IN THE S4 DOCU)
4: FLEXIBLE TUBE IS LIKE THE DRIFT TUBE FROM THE REACTOR. A GUIDE FOR "SOMETHING" BOMBARDING ELEMENT 115 WITH TO CREATE THE FIELD.
ONLY MUCH MORE OF ELEMENT 115 PLATES ARE CLADDED ON THE INSIDE. HENCE A LARGER FIELD IS REQUIRED FOR TRAVEL
5: GRAVITY AMPLIFIERS ARE THE ACTUAL UNKNOWN ENERGY SOURCE. EACH SITS ON TOP OF AN EMITTER AND PROVIDES THEIR GRAVITY EMITTER WITH "SOMETHING" TO BOMBARD THE ELEMENT 115 WITH
1: "SOMETHING" BOMBARDING ELEMENT 115 CREATES A REPULSIVE FORCE FIELD
THIS IS NOT TECHNICALLY THE REACTOR!
2: THE PROTECTIVE REPULSIVE FORCE FIELD USES THE FLEXIBLE WAVEGUIDE TO SPREAD ONTO THE OUTSIDE HULL OF THE SHIP.
THE "REACTOR" IS A FIELD EMITTER, ONLY THERE FOR THE SHIP ITSELF. IT WOULD ONLY MAKE THE SHIP LOSE ITS INERTIAL PROPERTIES aka WEIGHTLESS

NOTES
I BELIEVE
BOB LAZAR

r/UFOs - Amy Eskridge vs Bob Lazar and propulsion theory

Amy claimed that Bob was 100% backwards in his theory about the 3 components (Reactor, Amplifier, and Emitters). And I think they are both right. The new S4 documentary gave some new insights. This is speculation, but from an engineering background, it makes more sense than anything out there. Check out the attached image for the different components.

Here are some described "facts", if you can call it that:

Element 115 was speculated to be copper colored.

The 3x "Emitters" had copper colored tiles in them, as was described in the latest S4 Lazar docu. -> Too far fetched to assume that this is also element 115?

The "Reactor" produces some kind of repulsive force field, but with no action/reaction force like you would have with a magnet. Some kind of inertial feeld in space then?

The 3x Gravity "Amplifiers" are not described at all, ever!

From an engineering perspective, it makes more sense that the semi-sphere "Reactor" is NOT the energy source, but also some kind of anti-gravity emitter, but one that shields just the craft, using the waveguide that sits on top of the reactor. So Amy is right that Bob had it 100% backwards.

The "Anti-Gravity Emitters" are described to have copper colored tiles in them. Is it too far fetched to come to the conclusion that this copper material is also Element 115? If they had 500lbs of Element 115, it makes sense that it comes from other UFOs, and its not going to be 500lbs all in the shape of wedges, is it?!

You can make discs out of these tiles, and make them into wedges, to make a some kind of force field. This makes a lot of sense as a military scientific exploring path.

The "Emitters" have a tube connected to them.. Just like the "Reactor" inside has a bent tube connected to it. Note the similarity between both!

Its like you need some kind of source that shoots "Something" via a tube onto Element 115. (maybe electrons, who knows) , and then it produces this kind of field.

It also makes sense that these "Emitters" need much more Element 115 inside in the form of tiles, because they need to produce way larger fields for travel/transport.

What Bob called "Amplifiers" are probably the energy source. Why?

There are 3 of them, each above a strong heavy loaded element 115 "anti-gravity" emitter.

Centrally, we have the semi-sphere Reactor with a "cyclotron" inside, they could draw some energy from the power sources, just to shield the ship with a force field.

I havent read this theory anywhere yet. But as an engineer/ science enthousiast, it makes more sense than anything I've seen yet. It combines whatever Amy claimed to be 100% inverted from what Lazar said.

The following submission statement was provided by u/Happy-Car-2641:

I do see a repeating pattern when looking at the reactor, and an emitter mounted in the ship, they both have: .

A Tube -> emit something > Element 115 -> emit some field -> the semisphere / hull of the ship -> repulsive field.

If the emitter indeed also has 115 in it, the field points to the hull of the ship. Just like the reactor has the semi hemisphere. I think the semisphere or hull is equally important. Let's not forget that everything looked to be the same material.

Please reply to OP's comment here: https://old.reddit.com/r/UFOs/comments/1spuqyd/amy_eskridge_vs_bob_lazar_and_propulsion_theory/oh7jp3l/

If the machined 115 is a stack of "coins", how are they held together after machining?

The emitters coreplates being 115, kind of makes sense if it distorts gravity. Maybe when you send a wave through an emitter it becomes concentrated because it passes a tube lined with 115?

Yeah… but don’t we know at this point that moscovium doesn’t have the properties for Lazar’s claims to be possible? Sure, it does exist in the island of stability, but its half-life is still only 0.65s (though, I guess some theoretical isotopes may be longer).

11

aureliorramos

•

3d ago

There are conceivably multiple isotopes of moscovium. We know of one that has a short half life. This leaves some options open an uncertain.

Do people think UFO’s negate gravity?

11

u/MKULTRA_Escapee avatar

MKULTRA_Escapee

•

4d ago

It depends on who you ask. Paul R. Hill concluded that UFOs produce a field "akin to gravity, but of an opposite nature." He concluded what he did after studying a large number of reports over decades, tossing out each possibility that doesn't explain the whole.

This field could be exploited such that inertia on the occupants is canceled out. Here is his take on UFO acceleration and g force cancellation from his book, page 220 and 221: https://imgur.com/a/iPxiYFM

That sounds like what Lazar was saying on American Alchemy. It’s not gravity, but another force that similar characteristics but repels instead of attracts.

It's interesting to speculate... this would align with Tesla's "Dynamic Theory of Gravity" and T Townsend Brown's work. If the vacuum of space isn't empty and there are electromagnetic forces in the ether, then a strong diagmetic element like a stable 115's use is compelling and interesting to ponder. This could help explain Eric Weinstein's stance of no real physics advancement over the last 50 years too.

He said he doesn’t know the exact isotope and wishes he did

5

major__tim

•

4d ago

Yeah and I thought to myself several times during that interview that it seemed like he was obfuscating or withholding or just twisting things a little so as to not plainly announce to the world what he knows to be true. For example - I think that Amy stating that he had the mechanism “100% exactly backwards” was her saying that he’d put the truth out there without being guilty of putting the truth out there. I didn’t take it to mean that she thought that he had it wrong but rather that she was pointing to him having a deeper understanding than he’s letting on.

Edit - he also basically copped to having some 115 in the same way that he acknowledged on A52 that he’d kept something from s4

4

u/ohfabo avatar

How did Lazar know it was element 115 did he have equipment to test it ? It could have been anything. I've always wondered. I mean the people at S4 could have just told him that . It could be something completely different.

2

TheNon-PrayingMantis

•

4d ago

He had two ways of detecting it that he mentioned in the Jesse Michels podcast. Atomic absorption spectroscopy and I believe gamma spectroscopy. Edit: changed x-ray to gamma.

This triangle shaped piece reminds me a horn antenna. Maybe it works as a resonator and impedance matching in one piece? But for some other, unknown field. I've never heard about the stacking mentioned below, but maybe the grooves were there for wavelength tuning and were spaced by some fraction of the required wavelength? The theory that there are separate emitters is plausible, but if I remember, Bob said they were somehow "wirelessly" connected. But maybe they were only working in synergy, automatically regulating the strengths of the fields?

Great response! If E115 resonates at 7.5hz, that should also help you think about the problem is a slightly different way. Is it possible the mind is the energy source? Think about John Miles and resonate interactions and then layer in the Casimir effect.

1

u/snapplepapple1 avatar

snapplepapple1

Exotic propulsion theories might have similar steps like it seems theres usually a 2 step process to produce or amplify something and a second step to control it or manipulate it.

1

u/Happy-Car-2641 avatar

Happy-Car-2641

OP

•

3d ago

I agree: the fact that the semi hemisphere needs to be there for the force field for example. In the case for the emitters, the bottom material of the ship acts just the same as the semi hemisphere on the reactor.

Going on what the texts that said Bob had it backwards. What if:

Proton bombardment creates resonant conditions

Element 115's intrinsic THz oscillation couples with the ZPF

Vacuum energy is extracted asymmetrically

The "antimatter radiation" was actually vacuum fluctuation modulation (Hawking like radiation equivalent, or just the signature of ZPF coupling)

Power comes from the vacuum, not the antimatter reaction

Lazar said protons, but he also said the exact frequency/timing matters. In ZPE terms: The bombardment frequency might need to match the Larmor precession frequency of element 115's electrons, or more specifically, the resonant frequency of the $7p_1/_2 \leftrightarrow 7p_3/_2$ spin-orbit transition

Element 115 is weird. At this point I'm pretty sure we have enough smart people that we could get it to work… if we could find a stable isotope of Moscovium, but that's the biggest problem.

Man, what exactly is this analysis? A simple one time watch of anything on Lazar would tell you that the reactor had Element 115 wafer going in it, not the three Emitters.

0

u/Happy-Car-2641 avatar

Happy-Car-2641

OP

•

4d ago

yes, but its really a coincidence that the emitters ALSO have this copper colored material inside? In a place where you also want to generate a field, in a much more stronger fashion?

If they have 500lbs of 115 as what they claim.. it cant come from just small wedge pieces can it. It makes more sense that they got it from the emitters.

To me, one baffling thing was how everything was connected, and I may have possibly missed this, but your explanation would explain why the gravity, emitters that they had in the lab would activate when you twist or rotate it in a certain manner. They were assuming that the reactor was powering it. When in reality, the emitters were self powered by the tiles as you pointed out.
